Career Objective

Computer Science Engineering graduate with strong skills in Python, OOP, Data Structures, and problem solving. Hands-on experience developing AI-powered applications using Machine Learning, Generative AI, REST APIs, and Python frameworks. Passionate about building scalable AI solutions and continuously learning emerging technologies.

Education

B.E. Computer Science and Engineering

Dec 2022 - May 2026

SDM Institute of Technology, Ujire

CGPA: 8.65

PCMCs (Pre-University)

Apr 2021-Apr 2022

Sadvidya Composite PU College, Mysuru

Percentage: 71.83%

Class X

Apr 2019-Apr 2020

Eshwar Vidyalaya(CBSE), Mysuru

CGPA: 8.0

Skills

Languages: Python, Java, C

AI/ML: Machine Learning, NLP, Deep Learning, Generative AI

Databases: Oracle SQL, MongoDB

Data: NumPy, Pandas, EDA, Scikit-Learn

AI Tools: Hugging Face, PyTorch, Gradio

Backend: Flask, FastAPI, REST APIs

Cloud/DevOps: GCP, Docker, Git

Visualization: Power BI, Matplotlib, Seaborn

Concepts: OOP, Data Structures

Other: Design Patterns, Problem Solving

Internships

Python & Data Science Intern

Jan 2026 - Present

Organization: QSpiders, Mysuru

Projects: Tech Salary Analysis and YouTube Data Analysis

Technologies Used: Python, SQL, Power BI, Excel, NumPy, Pandas, Matplotlib, Seaborn

- Developed Python applications for data analysis and machine learning using NumPy, Pandas, and Scikit-Learn.
- Built backend functionalities using Flask and worked with structured datasets using SQL.
- Applied Object-Oriented Programming principles while developing reusable Python modules.
- Leveraged AI-assisted development tools to improve coding productivity and debugging.

Data Science Intern (Remote)

Jul 2025 - Sep 2025

Organization: Infotact Solutions, Bengaluru

Project: Traffic Simulation using SUMO with Reinforcement Learning

Technologies Used: Python, Q-Learning, SUMO

- Engineered Q-learning model to dynamically control traffic signals, reducing average vehicle wait time by 12
- Implemented traffic simulation using SUMO for real-time traffic flow analysis

Projects

Real Time Text-to-Image Generator

May 2026

Technologies Used: Python, PyTorch, Hugging Face Diffusers, Gradio

GitHub: github.com/MANJU-AR/TEXT-TO-IMAGE-GENERATION

- Built a Generative AI application using Stable Diffusion for real-time text-to-image generation.
- Integrated Hugging Face Diffusers and PyTorch pipelines for efficient AI inference.
- Developed an interactive Gradio interface for prompt-based image generation.
- Gained hands-on experience with LLM/Generative AI concepts, prompt engineering, and AI model deployment.

Forensic Face Sketch Construction and Recognition

Dec 2025

Technologies Used: Python, MTCNN, FaceNet, Flask

Live: eye-identify.vercel.app

- Built an AI-powered facial recognition system using MTCNN and FaceNet embeddings.
- Developed REST endpoints using Flask for image processing and face matching.
- Applied Object-Oriented Programming to create modular and maintainable application architecture.
- **Publication:** FaceNet-Driven Forensic Face Sketch Construction and Database Matching *IJRCST* (DOI Link)

Certifications

Machine Learning with Python - IBM

Python for Data Science - Udemy

Google AI Essentials - Google

Database and SQL - Infosys Springboard

Extracurricular

- **Student Coordinator, Youth Red Cross:** Organized blood donation drives (200+ donors) and conducted first aid sessions for volunteers.
- **Bharat Scouts and Guides:** Awarded **Rajya Puraskar** for community service and leadership initiatives.
