## Career Objective

Computer Science Engineering graduate with practical experience in Python, Machine Learning, Data Science. Proficient in developing predictive models, analyzing data, and building software solutions using modern tools and frameworks. Seeking an opportunity to leverage technical and problem-solving skills to contribute to AI/ML, Data Science, or Technology-driven roles..

## Education

### B.E. Computer Science and Engineering

SDM Institute of Technology, Ujire

Dec 2022 - May 2026

**CGPA: 8.65**

### PCMCs (Pre-University)

Sadvidya Composite PU College, Mysuru

Apr 2021-Apr 2022

**Percentage: 71.83%**

### Class X

Eshwar Vidyalaya(CBSE), Mysuru

Apr 2019-Apr 2020

**CGPA: 8.0**

## Skills

**Languages:** Python, C, Java

**Machine Learning:** Scikit-Learn, NLP, Deep Learning

**Data:** NumPy, Pandas, Data Wrangling,EDA

**Visualization:** Power BI, Matplotlib, Seaborn

**Databases:** Oracle SQL, MongoDB

**Frameworks/Tools:** Flask, GCP, Streamlit, Excel

**Concepts:** Data Structures,OOP,Problem Solving

**Version Control:** Git, GitHub

## Internships

### Python & Data Science Intern

Jan 2026 - Present

**Organization:** QSpiders, Mysuru

**Projects:** Tech Salary Analysis and YouTube Data Analysis

**Technologies Used:** Python, SQL, Power BI, Excel, NumPy, Pandas, Matplotlib, Seaborn

- Developed strong foundations in Python, SQL, Power BI, and Excel through practical data analysis and reporting tasks.
- Collaborated with mentors and peers on YouTube Data Analysis and Tech Salary Analysis projects, utilizing NumPy, Pandas, Matplotlib, and Seaborn for data cleaning, visualization, and insight generation.
- Currently building machine learning models and evaluating predictive techniques using Scikit-Learn and Python.

### Data Science Intern (Remote)

Jul 2025 - Sep 2025

**Organization:** Infotact Solutions, Bengaluru

**Project:** Traffic Simulation using SUMO with Reinforcement Learning

**Technologies Used:** Python, Q-Learning, SUMO

- Engineered Q-learning model to dynamically control traffic signals, reducing average vehicle wait time by 12
- Implemented traffic simulation using SUMO for real-time traffic flow analysis

## Projects

### Forensic Face Sketch Construction and Recognition

Dec 2025

**Technologies Used:** Python, MTCNN, FaceNet, Flask

**Live:** eye-dentify.vercel.app

- Built a facial recognition system generating embeddings using FaceNet for suspect identification
- Designed a drag-and-drop sketch interface and documented system workflows to improve usability and maintainability.
- **Publication:** FaceNet-Driven Forensic Face Sketch Construction and Database Matching *IJRCST* (DOI Link)

### Heart Disease Prediction Web App

Jan 2025

**Technologies Used:** Python, Flask, Logistic Regression

**GitHub:** github.com/MANJU-AR/...

- Implemented ML model achieving 85% accuracy for early heart disease prediction
- Deployed Flask web app enabling real-time risk prediction

## Certifications

Machine Learning with Python - IBM

Python for Data Science - Udemy

Google AI Essentials - Google

Database and SQL - Infosys Springboard

## Extracurricular

- **Student Coordinator, Youth Red Cross:** Organized blood donation drives (200+ donors) and conducted first aid sessions for volunteers.
- **Bharat Scouts and Guides:** Awarded **Rajya Puraskar** for community service and leadership initiatives.
