Career Objective

Machine Learning Engineer with practical experience in developing predictive models, NLP systems, and reinforcement learning solutions using Python. Built and deployed projects in traffic simulation and healthcare analytics, achieving measurable performance improvements. Actively shares work on GitHub and seeking to contribute to real-world ML applications while expanding technical expertise.

Education

B.E. Computer Science and Engineering Dec 2022 - Present
SDM Institute of Technology, Ujire **CGPA: 8.50**

PCMCs (Pre-University) Apr 2021-Apr 2022
Sadvidya Composite PU College, Mysuru **Percentage: 71.83%**

Skills

Languages: Python, C, Java
Machine Learning: Scikit-Learn, NLP, Deep Learning, EDA
Data: NumPy, Pandas, Data Wrangling
Visualization: Power BI, Matplotlib, Seaborn
Databases: Oracle SQL, MongoDB
Frameworks/Tools: Flask, GCP, Streamlit, Excel

Internship

Python & Data Science Intern Jan 2026 - Present

Organization: QSpiders, Mysuru
Tech Stack: Python, SQL, Power BI, Excel
• Built a strong foundation in Python for data science
• In upcoming phase, will work on projects involving Pandas, NumPy, and machine learning techniques

Data Science Intern (Remote) Jul 2025 - Sep 2025

Organization: Infotact Solutions, Bengaluru
Project: Traffic Simulation using SUMO with Reinforcement Learning
Tech Stack: Python, Q-Learning, SUMO
GitHub: github.com/MANJU-AR/...
• Developed Q-learning model to dynamically control traffic signals, reducing average vehicle wait time by 12%
• Implemented traffic simulation using SUMO for real-time traffic flow analysis

Projects

Forensic Face Sketch Construction and Recognition Dec 2025

Tech Stack: Python, MTCNN, FaceNet, Flask
Live: eye-identify.vercel.app
• Built a facial recognition system generating embeddings using FaceNet for suspect identification
• Designed drag-and-drop sketch interface improving usability for forensic workflows
• **Publication:** FaceNet-Driven Forensic Face Sketch Construction and Database Matching *IJRCST* (DOI Link)

Heart Disease Prediction Web App Jan 2025

Tech Stack: Python, Flask, Logistic Regression
GitHub: github.com/MANJU-AR/...
• Built ML model achieving 85% accuracy for early heart disease prediction
• Deployed Flask web app enabling real-time risk prediction

Certifications

- Machine Learning with Python - IBM
- Python for Data Science - Udemy
- Google AI Essentials - Google
- Data Analytics Job Simulation - Forage

Extracurricular

- Student Coordinator, Youth Red Cross:** Organized blood donation drives (200+ donors) and conducted first aid sessions for volunteers.
- Bharat Scouts and Guides:** Awarded **Rajya Puraskar** for community service and leadership initiatives.
